About Me

How I got into coding

In 2014, I wanted to have a website to showcase my photography. I started with WordPress templates but never found one that spoke to me. I decided to learn enough coding to build my own webpage. Eventually, I landed on Codecademy's site. I took one class, then two, then three... until I had taken nearly every course on the site. I was hooked and have been since. I have expanded my knowledge and built several projects. I enjoy the challenge of solving problems with code.

Skills Summary

- React
- React Native
- Angular
- NodeJS
- ExpressJS
- MongoDB/SQL
- Ruby-on-Rails
- Git

Current Project

Building a React-Native Client to interface with my citation tracking application

Professional Experience
